## WiTDM for Broadcasting Application

Date: Mar.' 3' 2017'  
No. : EJ201703HC002

Formosa Wireless recently helped a Commercial Radio Station in Taipei to establish WiTDM Links for sending broadcasting signals.

The Commercial Radio Station is located in the heart of downtown Taipei City in Taiwan surrounded by many tall buildings.

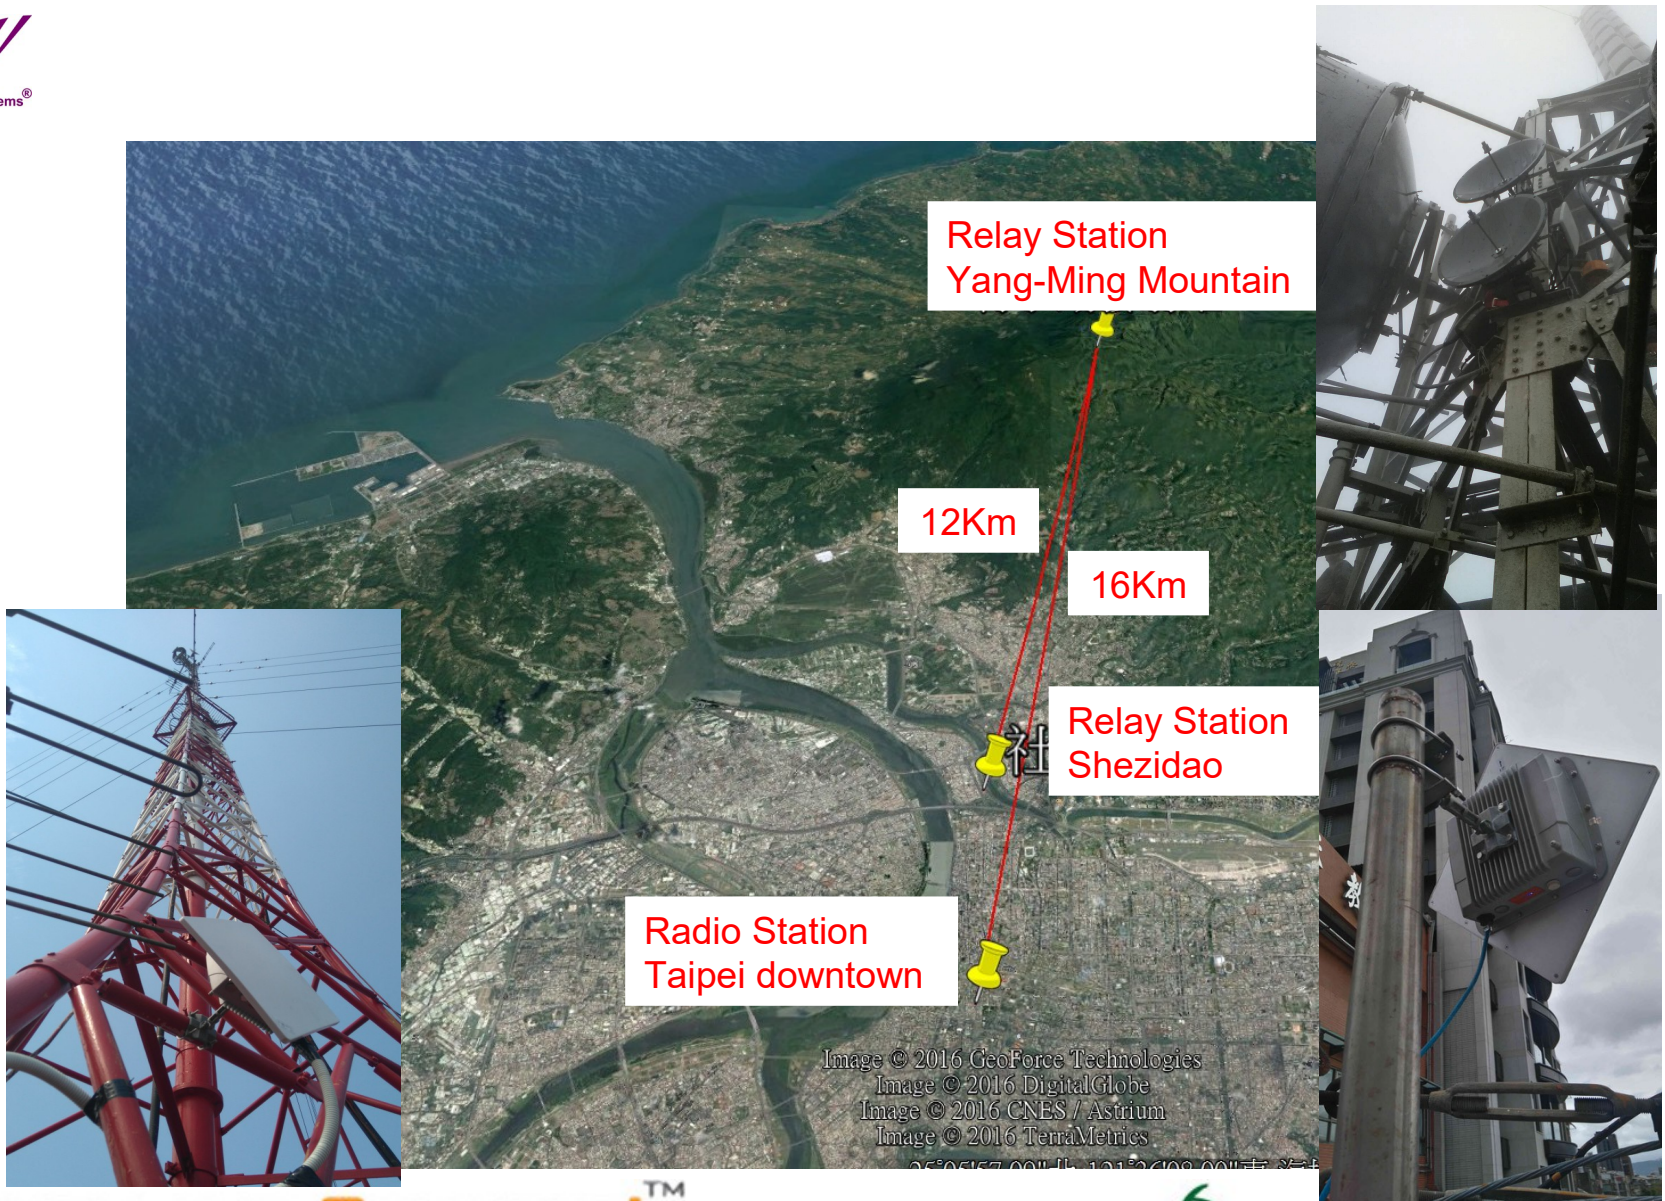

There are 2 Relay Stations, one on top of the Yang-Ming Mountain and the other in Shezidao.

The original structure was sending the signal data via wired system. But it was unstable due to the Relay Stations are both in the very remote areas.

By using WiTDM solution, we solved the obstruction issue of tall buildings and successfully built-up the wireless connections among Radio Station and the 2 Relay Stations.

Our WiTDM provides a better Radio quality to the listeners because of the reliable wireless WiTDM connections.
