

Case Study

Monitor the Earthquake in Taiwan

Date: Mar.' 10' 2017'
No. : EJ201703HC005

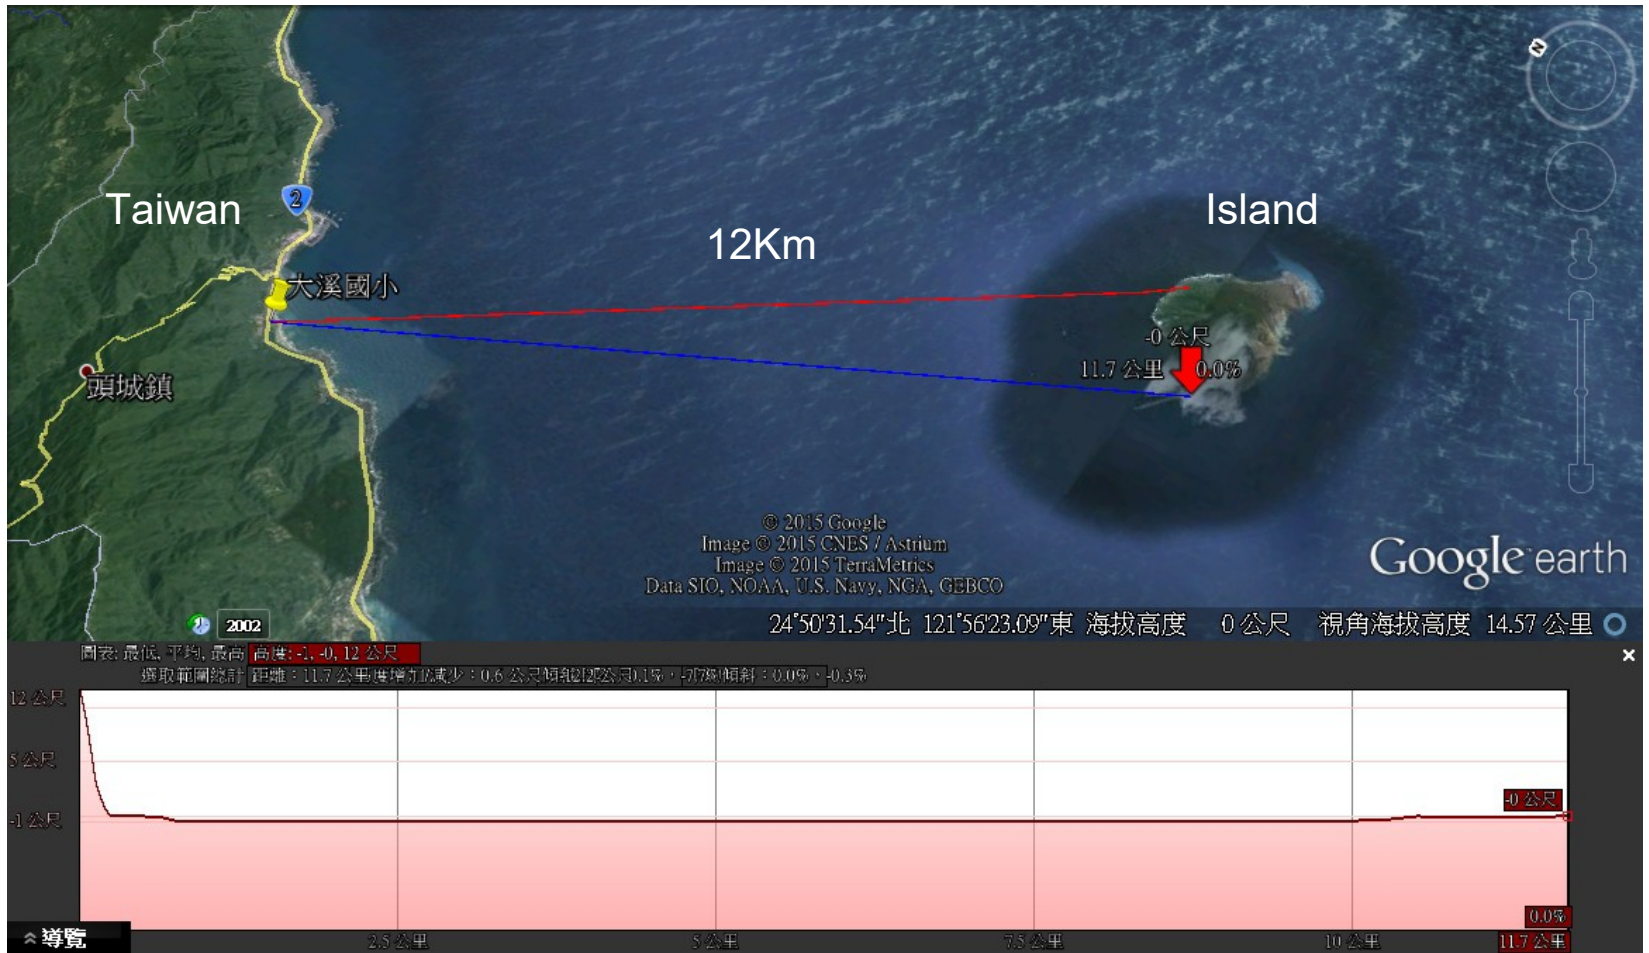

Taiwan is located in the geologically active area in seismic belt of Pacific Rim.

How to monitor and detect earthquake is a very important task.

Formosa Wireless helped Taiwanese government established 2 WiTDM Links between Taiwan and an off-shore island in sending all those data collected by the monitoring/detecting equipments via WiTDM Links back to their control center in Taiwan.

The staffs in the control center can get the information of the geology activities in real-time.
